

Please amend the present application as follows:

Claims

The following is a copy of Applicant's claims that identifies language being added with underlining ("__") and language being deleted with strikethrough ("—"), as is applicable:

1. (Previously presented) A method for facilitating sale of a network-enabled device that is practiced by the network-enabled device, the method comprising:

receiving with the network-enabled device an indication of an intent to sell the network-enabled device; and

automatically transmitting from the network-enabled device a request to a network-based sales service to post a sale notice that offers the network-enabled device for sale on a network.

2. (Canceled)

3. (Previously presented) The method of claim 1, wherein automatically transmitting a request comprises transmitting information concerning at least one of the network-enabled device and a seller of the device.

4. (Original) The method of claim 3, wherein the information includes at least an identification of the network-enabled device, a sale price, and contact information of the seller.

5. (Original) The method of claim 3, wherein the information includes use-specific information as to the manner in which the network-enabled device has been used.

6. (Previously presented) The method of claim 1, wherein automatically transmitting a request comprises transmitting an address that identifies a location of information pertinent to the network-enabled device.

7. (Original) The method of claim 6, wherein the information pertinent to the network-enabled device comprises a description of the device and its features.

8. (Original) The method of claim 6, wherein the information pertinent to the network-enabled device comprises an image of the device.

9. (Previously presented) The method of claim 1, further comprising prompting the user to select a sales service to post the sale notice.

10. (Previously presented) A system for facilitating sale of a network-enabled device, the system comprising:

means provided on the network-enabled device for receiving indication of an intent to sell the network-enabled device; and

means provided on the network-enabled device for facilitating transmission of a request to a network-based sales service to post a sale notice that offers the network-enabled device for sale on a network.

11. (Original) The system of claim 10, wherein the means for facilitating transmission of a request comprise means for facilitating transmission of information concerning at least one of the network-enabled device and a seller of the device.

12. (Original) The system of claim 10, wherein the means for facilitating transmission of a request comprise means for facilitating transmission of an address that identifies a location of information pertinent to the network-enabled device.

13. (Previously presented) A device sale manager stored on a computer-readable medium of a network-enabled device, the manager comprising:

logic configured to receive an indication of an intent to sell the network-enabled device; and

logic configured to facilitate transmission of a request to a network-based sales service to post a sale notice that offers the network-enabled device for sale on a network.

14. (Original) The sale manager of claim 13, wherein the logic configured to facilitate transmission of a request comprises logic configured to facilitate transmission of information concerning at least one of the network-enabled device and a seller of the device.

15. (Original) The sale manager of claim 14, wherein the information includes at least an identification of the network-enabled device, a sale price, and contact information of the seller.

16. (Original) The sale manager of claim 14, wherein the information includes use-specific information as to the manner in which the network-enabled device was used.

17. (Original) The sale manager of claim 13, wherein the logic configured to facilitate transmission of a request comprises logic configured to facilitate transmission of an address that identifies a location of information pertinent to the network-enabled device.

18. (Previously presented) A network-enabled device that is configured to facilitate sale of itself, the network-enabled device comprising:

a processing device; and

memory including a device sale manager, the sale manager including logic configured to receive an indication of an intent to sell the network-enabled device, and logic configured to facilitate transmission of a request to a network-based sales service to post a sale notice that offers the network-enabled device for sale on a network.

19. (Original) The device of claim 18, wherein the logic configured to facilitate transmission of a request comprises logic configured to facilitate transmission of information concerning at least one of the network-enabled device and a seller of the device.

20. (Original) The device of claim 19, wherein the information includes at least an identification of the network-enabled device, a sale price, and contact information of the seller.

21. (Original) The device of claim 19, wherein the information includes use-specific information as to the manner in which the network-enabled device was used.

22. (Original) The device of claim 18, wherein the logic configured to facilitate transmission of a request comprises logic configured to facilitate transmission of an address that identifies a location of information pertinent to the network-enabled device.

23. (New) The method of claim 1, further comprising automatically creating a sale notice on the network-enabled device that includes information regarding the network-enabled device such that a user need not manually provide this information.

24. (New) The method of claim 23, wherein the information comprises at least one of device specifications and functionality.

25. (New) The method of claim 23, wherein the information comprises use-specific information about the network-enabled device that was recorded by the network-enabled device.

26. (New) The method of claim 25, wherein the use-specific information includes at least one of the number of hours the device has been used, the number of times the device has been serviced and the nature of the services, the number of miles the device has been driven, and the average speed the device has been driven.

27. (New) The method of claim 1, further comprising recording on the network-enabled device information about how a user uses the network-enabled device for purposes of including this information in the sale notice.

28. (New) The method of claim 1, wherein the network-enabled device is one of a printer, kitchen appliance, and an automobile.

29. (New) The system of claim 10, further comprising means for automatically creating a sale notice on the network-enabled device that includes information regarding the network-enabled device such that a user need not manually provide this information.

30. (New) The system of claim 10, further comprising means for recording on the network-enabled device information about how a user uses the network-enabled device for purposes of including this information in the sale notice.

31. (New) The system of claim 10; wherein the network-enabled device is one of a printer, kitchen appliance, and an automobile.

32. (New) The manager of claim 13, further comprising logic configured to automatically create a sale notice on the network-enabled device that includes information regarding the network-enabled device such that a user need not manually provide this information.

33. (New) The manager of claim 13, further comprising logic configured to record on the network-enabled device information about how a user uses the network-enabled device for purposes of including this information in the sale notice.

34. (New) The manager of claim 13, wherein the network-enabled device is one of a printer, kitchen appliance, and an automobile.

35. (New) The network-enabled device of claim 18, further comprising logic configured to automatically create a sale notice on the network-enabled device that includes information regarding the network-enabled device such that a user need not manually provide this information.

36. (New) The network-enabled device of claim 18, further comprising logic configured to record on the network-enabled device information about how a user uses the network-enabled device for purposes of including this information in the sale notice.

37. (New) The network-enabled device of claim 18, wherein the network-enabled device is one of a printer, kitchen appliance, and an automobile.
